Client–Scrum Team Meeting Record: Use Case and Class Diagrams

Oct 18, 2026 · @Group 1

This record documents the meeting in which the Scrum team presented the use case diagram and the class diagram of the LiquorTrack system (Liquor Store Management System) to the client.

1. Meeting information

Item	Detail
Project	LiquorTrack – Liquor Store Management System
Team	Group No. 1
Team members	Enrique Ayala, Isaac Acurio, Demian Armas
Client representative	Holger Enrique Ayala Martinez
Meeting date	Oct 18, 2026
Location / medium	Tola Alta, workplace
Purpose	Present the use case diagram and the class diagram to the client for review

2. Agenda and scope

Only two artifacts were presented at this meeting: the use case diagram and the class diagram. No other deliverable was reviewed.

1. Welcome and presentation of the team members.
2. Presentation of the use case diagram: actors and the functions each one performs.
3. Presentation of the class diagram: classes, their attributes and operations, and how they relate.
4. Client questions, comments and requested changes.
5. Agreements and next steps.

3. Use case diagram presented

The diagram defines three actors (Owner, Cashier, Administrator) and fourteen use cases inside the LiquorTrack system boundary.

Actor	Use cases
Owner	Receive low-stock alerts; View outstanding customer balance; Record credit payment and status; View best-selling products report; Review sales by employee; Generate daily cash-closure report; Configure product profit margin

Escaneado con CamScanner

Actor	Use cases
Cashier	Record sale under the active cashier
Administrator	Manage suppliers and pending orders; Record receipt of supplier delivery

Relationships shown with the include notation:

- Record sale under the active cashier includes Process sale.
- Process sale includes Apply active promotions and discounts.
- Process sale includes Display age-verification reminder.
- Record receipt of supplier delivery includes Update inventory automatically.

4. Class diagram presented

The Liquor Store Management System class diagram has fifteen classes. Names, attributes and operations below are transcribed from the team's hand-drawn diagram.

Class	Attributes	Operations
Business	companyName: String; totalRevenue: double	generateReport(): Report; addStore(store: Store): void; updateLedger(): void
Report	reportId: int; totalSales: double	printReport(): void
Store	storeId: int; location: String	assignEmployee(employee: Employee): void; setupPos(pointOfSale: PointOfSale): void
Ledger	ledgerId: int; currentBalance: double	addIncome(amount: double): void
Employee	empId: int; name: String	clockIn(): void
PointOfSale	terminalId: int; status: String	login(cashier: Cashier): void
Cashier	shiftId: int; drawerBalance: double	serveCustomer(customer: Customer): void; processPayment(): Transaction; completeSale(): Sale
Customer	customerId: int; name: String; creditBalance: double	payDebt(amount: double): void
Transaction	transId: int; amount: double	approve(): void
Sale	saleId: int; totalAmount: double	addEntry(entry: Entry): void; generateRecord(): Record
Record	recordId: int; printedText: String	printReceipt(): void
Entry	entryId: int; quantity: int	assignItem(item: Item): void; calcSubtotal(): double

Escaneado con CamScanner

Class	Attributes	Operations
Item	barcode: String; sellingPrice: double	linkProduct(product: Product): void; applyDiscount(percentage: double): void
Product	productId: int; name: String; currentStock: int	reduceStock(quantity: int): void; generateAlert(): Alert; handleSupplier(supplier: Supplier): void
Alert	alertId: int; message: String	triggerSound(): void
Supplier	supplierId: int; companyName: String	receiveOrder(): void; refillStock(): void

Relationships drawn in the diagram:

- Business uses Store (one to many), uses Ledger, and creates Report.
- Store uses Employee and PointOfSale (one to many each).
- Cashier uses PointOfSale and Customer, and creates Transaction and Sale.
- Sale is composed of one or more Entry objects and creates Record.
- Entry uses Item; Item uses Product.
- Product creates Alert and uses Supplier.

5. Client feedback, agreements and action items

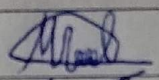

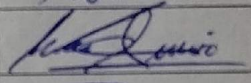

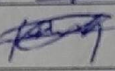

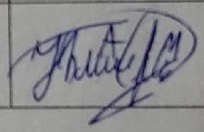

The client's comments and decisions were not provided to the author of this draft, so the fields below are left for the team to complete.

Topic	Client comment	Agreement / change requested
Class diagram	The class diagram was presented alongside the use cases and fully approved.	No changes required. Proceed with the established system architecture.
Use case diagram	The "LiquorTrack" use case diagram was presented and fully approved.	No changes required. Proceed with the established system requirements.

Action item	Responsible	Due date
Begin system implementation based on the approved Use Case and Class diagrams.	Isaac Acurio, Demian Armas, Enrique Ayala	Continue working on the code
